CODING AND MARKING SOLUTIONS

Quality and support from a partner you can trust

As a preferred supplier to major OEMs and many multi-national beverage companies, Domino understands the needs of your industry.

By working closely with wine, spirits, beer and soft drinks manufacturers, Domino's range of ink jet and laser products provide reliable, high speed and cost efficient coding solutions.

For more than 25 years, Domino has provided essential coding and marking technologies to the industry. During that time, continuous developments and product innovations have changed the industry, bringing efficiencies to manufacturers and increasing confidence among consumers.

Efficiencies and Innovations are Driving the Sector

The drive to improve line efficiencies and code onto diverse substrates demands new approaches, and new technologies. Recognising that fact, Domino takes a market-leading approach to product innovation in the beverage industry including the integration with other equipment, such as bottlers and labellers.

For you, it means the assurance of being able to rely on a partner that is passionate about its business and committed to supporting you.

Fast-Moving Beverage Lines Demand Accuracy at the Highest Speeds

Domino's close working relationship with industry-leading OEMs ensures that its technologies are sympathetic to the pressures of beverage manufacturers. Chief amongst which is the need for speed. Consequently Domino technologies are designed to deliver reliable results at the highest line speeds.

The clarity of print quality provided by Domino technologies ensures that codes are durable and easily read. They guarantee code integrity through the development of unique codes for PET, and implementing other recent technologies like UV inks, Data Matrix codes and Radio Frequency Identification (RFID).

Domino has developed ink specifically designed for the beverage industry. These include refrigeration fast, alkali soluble, steam sterilisable and inks that can withstand immersion in ice water.

Domino's track record in developing innovative inks and printing methods, ink jet and laser printer hardware, and end-user software demonstrates the strength of investment in the sector.

Efficient laser technology with industry-leading PET codes

Domino laser coding technology is of particular importance to the beverage industry. It is flexible enough to be applied to most packaging types, whilst also providing high-resolution fonts and graphics. It offers an efficient choice since it uses different and fewer consumables, is easily located within your lines, and able to code at high speed.

High Quality Output and Speed of Operation

A range of technologies combines to produce high quality laser codes onto glass, plastics, cans, and cartons.

Laser is a non-contact format, which makes it possible to apply clearly legible codes onto such substrates at speed and on curved or uneven surfaces.

For added peace of mind, Domino laser coders can also include code verification features; once marked, laser codes are also permanent.

Novel Technology Application for PET

Domino's blue tube laser technology produces a frosted effect, which reduces the risk of burning through the plastic. The advantage is that the code is more reliable, is easier to read (even after washdown) and can be applied at higher speeds than other methods.

Laser Features

There are many other features of the laser coding range which provide beverage manufacturers with distinct advantages:

- Excellent code clarity
- High quality graphics, barcodes and letter-quality text (multi-language)
- Permanent, durable codes onto an extensive range of substrates
- Reliable PET coding
- Fast and simple code set up and editing
- Longer service intervals than other methods

Ink jet solutions a flexible choice for cost effective marking

Domino's ink jet printing technology makes coding and marking simple and cost effective.

Ink jet coders enable you use to many types of ink for different purposes and to print at speed in difficult conditions.

Ink jet is also appropriate for materials that are difficult to mark by other means, such as certain plastics, glass and metals.

Outer Case Coding Advantages

Domino also supplies ink jet technologies for outer case coding. These enable you to print high quality bar codes, text, and graphics on final packaging. Customised information printed exactly to your requirements saves on the cost of pre-printed cases or labelling, and improves inventory management.

Developments in Ink Jet Create New Opportunities for Security

Domino continually invests in product development and innovation. Products can be marked unobtrusively with 'invisible' UV readable inks, which facilitate internal tracking prior to labelling, tracking products through the supply chain or to ensure against counterfeiting for high value spirits.

Encrypted number sequences can be produced and coded to further strengthen traceability and improve product security.

Ink Jet Features

- High contrast codes onto glass, metal, paper and many plastics
- Machine readable codes enable automation
- Diverse range of process specific inks including alkali soluble and steam sterilisable
- Outer case coding applications

Domino coding technologies - flexible, reliable, quality output

- Fast code changes
- High reliability
- Constantly variable data – real time capability including batch codes, expiry dates, sequential and random numbering, Data Matrix
- Easily installed, networked and remotely managed
- Innovation in inks and printers
- Global service and support
- Huge range of coding options: quality, speed, depth of content, durability, traceability and anti-counterfeiting applications for high value spirits
- Strong links with sector OEMs ensures rapid, smooth integration with production lines

Global Sales and Support

Domino provides the technologies and the backup to underpin all your time sensitive and quality-driven beverage packaging production requirements.

Through a network of in-country distributors and subsidiaries, Domino is able to support your operations around the world.

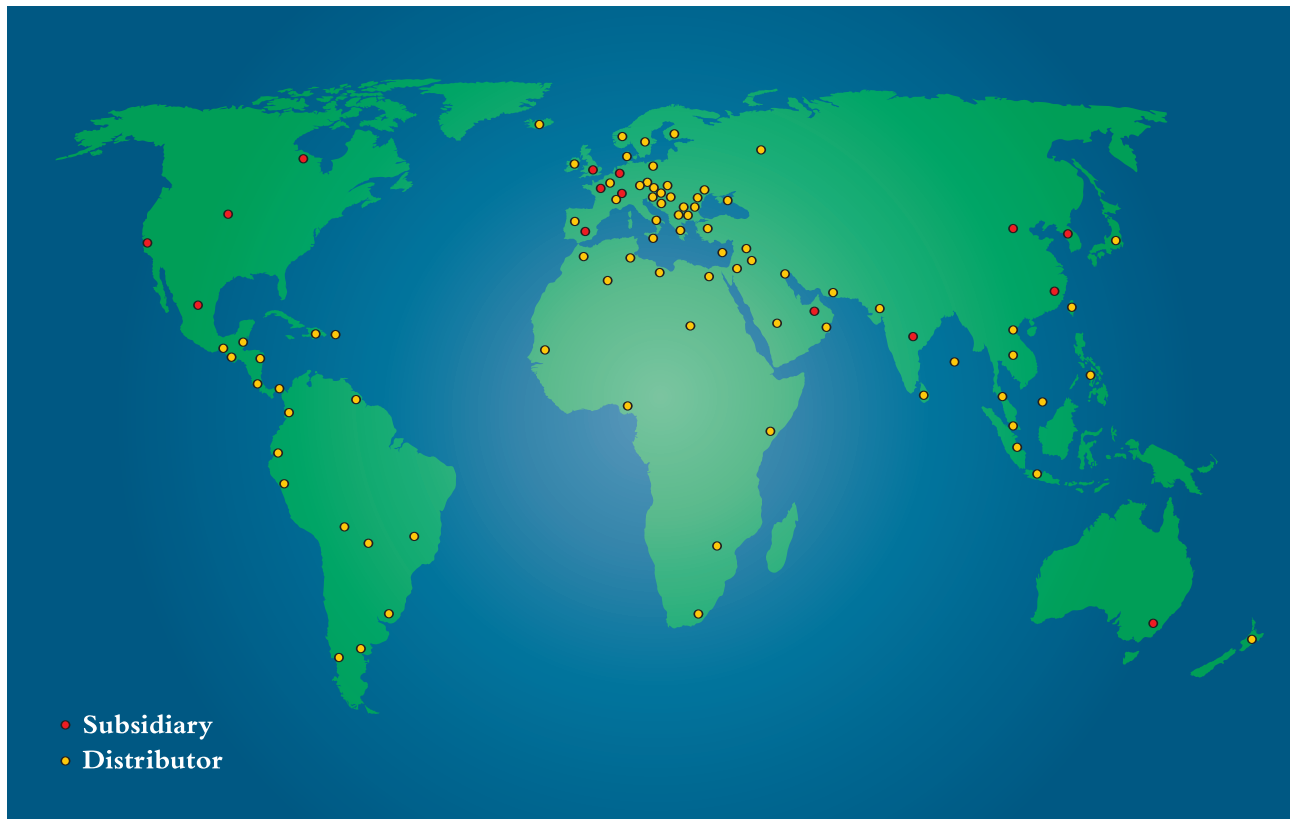

A dedicated after-sales service ensures that whatever the scale of operations Domino can provide immediate backup and training wherever you need it.

Domino's technologies support a range of languages including Arabic, Asian and European character sets.

Domino Worldwide

Through an extensive global network of subsidiaries and distributors, Domino operates in over 120 countries. This network offers customers both sales support and access to highly skilled service teams, providing technical support packages to suit the varying production environments and customer requirements across the world.
