

Hybrid Digital Printing with Domino

Domino. Do more.

Hybrid Digital Printing with Domino

Domino Printing Sciences hybrid solutions enable our customers to combine digital and flexographic technologies to deliver flexible, high-quality, and cost-efficient label production. With options like retrofit modules for existing presses and fully integrated systems, you can enhance your current line without extra space or major investment.

From the **N610i-R** to the high-resolution **N730i Integration Module**, Domino enables seamless upgrades, rapid changeovers, and variable data printing, helping you reduce waste, improve efficiency, and adapt to evolving demands.

Add the power of Domino to your production line and future-proof your business with scalable, hybrid printing innovation.

N610i Integration Module

Colours: 4/5/7
Width: 333mm

Resolution: 600dpi
Max Speed: 70m/min

The Domino **N610i Integration Module** is a proven 600dpi digital inkjet solution, designed to slot seamlessly, creating efficient hybrid printing lines within your current setup.

By combining digital print with analogue processes like flexo, die-cutting, and finishing in one streamlined workflow, it enhances your line without disruption. Ideal for multi-SKU production, it enables continuous printing with minimal downtime, reducing setup waste and increasing productivity.

N610i-R

Colours: 4/5
Width: 333mm

Resolution: 600dpi
Max Speed: 70m/min

Enhance your existing press with Domino **N610i-R**, a compact 600dpi retrofit module that fits directly onto your current flexo line, transforming it into a hybrid printing system without requiring extra space.

Delivering high-quality CMYK (with optional white), variable data printing, and speeds up to 70m/min, it enables efficient multi-SKU production with less waste and lower costs.

N-Series: Powered by Domino Sunrise DFE

Process jobs faster and more accurately than ever before.

The **N-Series** features the latest AI-enabled **Sunrise Digital Front End**, delivering smarter workflow and enhanced control:

- ◆ AI-powered RIP for faster processing
- ◆ Job Cost Calculator for accurate, real-time pricing
- ◆ Domino Media Manager for simplified substrate management, all from a centralised interface designed to streamline operations

Intelligent automation and new tools empower the press operator, reducing repetitive tasks for increased uptime without interruption to production

Digital Hybrid Printing Systems for High Quality Label Production

N730i Integration Module

Colours: 5/7
Width: 340mm

Resolution: 1200dpi
Max Speed: 90m/min

The **N730i Integration Module** features a seven-colour, 1200dpi print engine with Brother BITSTAR™ printheads, delivering outstanding print quality and precision within a hybrid label press.

Designed for flexibility, the **N730i Integration Module** can be configured with flexo stations and integrated finishing options such as lamination, die-cutting, and embellishment, allowing you to create a tailored, high-performance hybrid solution that meets evolving production demands.

N717i-R

Colours: 6
Width: 440mm

Resolution: 1200dpi
Max Speed: 90m/min

The Domino **N717i-R** offers a 440mm print width, enabling wider labels and more efficient runs while fitting seamlessly onto your existing flexo line to create a versatile hybrid printing solution.

With six-colour digital printing and variable data capability, it improves efficiency on multi-SKU jobs, reduces waste, and enhances productivity, bringing greater flexibility and value to your current press.

While the **N717i-R** does not include white ink as standard, we can provide a tailored solution with the **K717i** to integrate white ink capability where required, ensuring you still achieve the opacity and design versatility needed for premium label applications.

K-Series: Enhancing Your Hybrid Printing Line

Domino's **K-Series** monochrome inkjet printers are a perfect addition to hybrid printing setups, bringing high-speed, high-resolution variable data printing into your existing workflow.

The **K-Series** enhances hybrid lines with reliable printing of barcodes, QR codes, serialisation, and variable data across a wide range of substrates, supporting traceability, compliance, and supply chain efficiency.

With flexible configuration, smart automation, and Domino's global support network, the **K-Series** helps you maximise productivity, improve data accuracy, and unlock even greater value from your hybrid installation.
