

Yogurt production introduces unique challenges—from condensation to foil lids and curved packaging. Use this audit to identify risks, inefficiencies, and opportunities for improvement.

- Are codes clearly readable on sealed lids without fading or distortion?
- Do codes stand out across all packaging materials?
- Do codes remain intact despite condensation or handling?
- Are codes consistently placed within limited print areas?
- Does code quality hold at peak yogurt production speeds?
- Are correct codes applied during frequent product changes?
- Is code quality unaffected by refrigeration conditions?
- Do codes properly adhere to packaging exposed to condensation?
- Does your system withstand frequent cleaning?
- Are codes consistent between individual packs and outer cases?
- Do codes meet labeling requirements across all distribution channels?
- Can products be quickly traced through accurate and consistent batch coding?
- Are systems designed to minimize manual intervention and reduce coding errors?
- Is coding equipment contributing to line stoppages or inefficiencies?
- Is your line prepared for QR codes, GS1 Digital Link, & evolving traceability demands?

0-3 Low Risk

4-8 Moderate Risk

9+ High Risk
